Project: Election Intelligence Analytics: A Data Analytics Capstone Project

Version: 1.0

Date: 07 August 2026

Purpose

This document defines the data elements used in the Election Intelligence Analytics project to ensure consistent understanding across SQL and Python analysis.

constituency

Column	Data Type	Description	Remarks
ac_number	INT	Unique constituency ID	PK
constituency	VARCHAR	Constituency name	
district	VARCHAR	District name	
region	VARCHAR	Region name	
reserved	VARCHAR	Indicates the reservation status of a constituency (General, SC, or ST) according to election classification.	General/SC/ST

election_results

Column	Data Type	Description	Remarks
election_year	INT	Election year	2021/2026
ac_number	INT	Links to constituency	FK
candidate	VARCHAR	Candidate name	
party	VARCHAR	Political party name	
votes	INT	Votes received	
turnout	DECIMAL	Percentage of registered voters who participated in the election.	
reserved	VARCHAR	Indicates the reservation status of a constituency (General, SC, or ST) according to	

		election classification.	
Region name	VARCHAR	Region	

Relationships

- constituency.ac_number (Primary Key)
- election_results.ac_number (Foreign Key)
- Each election result record belongs to one specific constituency through ac_number.

Data Quality Rules

- ac_number must be unique in constituency table.
- election_year must contain valid election years.
- votes must contain numeric values only.
- turnout should contain valid percentage values when available
- No duplicate election result records should exist.
- Political party names must follow standardized naming conventions.
- Candidate and party fields should not contain missing values for valid election records.
